

Recommendation letter

I have had the pleasure of supervising Mr. Naman Gupta at Mu Sigma Business Solutions Pvt. Ltd., Bangalore from a year till date as his manager. He has been exceptional in the performance of all the tasks entrusted to him, displaying the utmost sense of professionalism in the process. If his performance here is any indication, I am certain that he will be a great asset to any organization or educational institute he will be associated with. Positive responses to constructive feedback, regular doubt clearing, and constant un-learning and re-learning were hallmarks of his approach towards the job. It came as a little surprise to me when he adapted to the ongoing project team's environment with relative ease and up-skilled himself to contribute to the project work. Within a short period, he proactively took ownership of deliverables and met client expectations. It would be fair to say that he became a critical part of the team, owning the responsibility for a majority of the deliverables. He even became confident enough to train new resources, helping them with the learning curve.

The client we work for is a USA-based CPG giant. Naman's role as a Decision Scientist in the project includes performing exploratory data analysis, creating ETL pipelines, generating interactive reports involving vital metrics used in the enhancement of Business. He has always been passionate about Analytics, which enabled him to enlighten the team with innovative ideas for developing solutions that supported other teams as well. This included a significant amount of data clean-up and analysis using Python, SQL, and Apache Spark. Inter-personal skills are an area where Naman truly shines. Despite coming from a technical background, he is highly capable of cross-team collaboration. I have been a part of this organization for almost 3 years now and my professional experience has taught me that technical acumen can take a professional only to a certain extent. The rest is based on soft skills like teamwork, coordination, and communication. Naman checked all these boxes and he has always amazed me with his presentation skills and his clear communication to set realistic expectations during client meetings. This is a testament to my praise of his non-technical skill set and desire to be the best he can be.

All the success Naman has experienced does not come naturally. It takes immense hard work. I was a personal witness to his view of learning. He has been able to learn new technologies and constantly push himself out of his comfort zone because of his attitude towards learning. I am certain these same qualities will make him a worthy student of your university. I am sure that your graduate education will work wonders for his career and allow him to reach his true potential.

Sincerely,

Nabakishore Neog
