

Letter of Recommendation

To whomsoever, it may concern.

I have known Mr. Naman Gupta as a valuable employee who is always motivated to go the extra mile on his responsibilities and make his work evident for his skills. From an evaluation stance, I can gladly say that Naman is one of the most exceptional candidates I have come across in the past five years. Naman is appointed as a Trainee Decision Scientist at Mu Sigma, India, and has been working on providing data-driven solutions to an American multinational manufacturer. It is on the foundation of his intelligence that I am writing this letter to expound on his capability.

The work at the firm is often demanding, and we always look for a candidate who is inquisitive and does not hesitate to work on multiple areas. Besides strong investigative skills, candidates are expected to carry excellent communication skills needed to handle the client queries and requirements. As his former manager, I have personally interviewed and observed his work on a variety of instances in projects and can attest to the following:

Naman in my opinion is a passionate learner, one who at times is ready to work for 12-14 hours a day if it comes to learning a new skill or solving a complex problem existing in the project. Although he is young yet he has shown remarkable composure and maturity required to lead projects at times. He has made a seamless transition from a brilliant Mechanical graduate from Vellore Institute of Technology to a professional decision scientist at Mu Sigma. He is a skillful professional who has successfully implemented theoretical and professional acquaintance acquired from the professional training at Mu Sigma University, which is the firm's own learning and career development program for data analytics. We thoroughly reap the benefits from his creative inputs on problem-solving and analyzing business requirements.

Naman's most important strength is ownership, and he demonstrates it over and over again in the way he manages his domain in the project and works productively. I recognized his talent and interest in analytics in his very first project and began giving him more responsibilities then. He has worked on projects from understanding the business requirement to pitching in the solutions and then working on implementing the same in real. He was always very committed and focused on delivering on time and can add to any team he is a part of, his energy to make things happen is contagious.

Based on his performance and responsive nature, he was provided with one of the threads in the project to handle, undoubtedly the work was executed with utmost diligence. Naman has displayed excellent team orientation and played a proactive role without stepping on other senior members' toes. Naman brought an utmost dedication to the assigned tasks, never compromising on the quality of output despite short turnaround time or personal exigencies. He listens patiently, asks insightful questions to get clarity, and executes the work with equal efficiency and professionalism.

Fresh out of college, there were several instances where Naman had no prior practical experience in the area of work. Still, he showed his sincerity in learning and again proved to be an impressive intellect, quick to grasp the implications, persistent in identifying solutions while expecting implementation challenges and addressing them proactively. I know that over the past few months, Naman has tested his technical expertise in depth and feels that a graduate program in this direction is the best way to hone his skills. Given his career goals, I strongly feel he needs and deserves the challenge that a program of your stature can provide. If his progress at the firm and the respect he has earned is any indication, he will make an outstanding student. I give him my unqualified endorsement.

Sincerely,

Navneet Kaur
